

Do you have patients with chronic nasolacrimal duct obstruction in need of surgical correction?

Did you know that Dacryocystorhinostomy (DCR) can be performed without an external incision?

## Three aspects to consider:

### THE ENOSCOPIC DCR APPROACH

- No external incisions or scars
- No postoperative wound or sutures
- 90% plus success rate

- Prompt appointment scheduling
- Quick symptom improvement
- Minimal postoperative discomfort
- Rapid return to normal activity

- Over 10 years of endoscopic DCR experience
- Evaluation and correction of coexisting nasal conditions that could reduce long-term success
- Pediatric and adult experience
